Abstract

The present invention aims at providing a novel fused ring compound having a GPR40 receptor function modulating action and being useful as an insulin secretagogue or a pharmaceutical agent for the prophylaxis or treatment of diabetes, more particularly, a compound represented by the formula:

wherein Ar is an optionally substituted cyclic group,
ring A is a ring optionally further substituted (provided that
the ring is not thiazole, oxazole, imidazole and pyrazole),
Xa and Xb are each independently a bond or a spacer having a
main chain of 1 to 5 atom(s),

Xc is O, S, SO or SO_2 ,

15 ring B is a 5- to 7-membered ring,

Xd is a bond, CH or CH₂,

 $\underline{\cdots}$ is a single bond when Xd is a bond or CH_2 , or a double bond when Xd is CH, and

R1 is an optionally substituted hydroxy group, and a salt thereof.
